This document defines the changes made to the Network Manager product for fix release v4.2.0.0 Fix 42 and is specifically targeted at end users.

After reading through this document, should you have any further training or consultancy requirements then please contact your **exor** account manager.

Fix Details

Baseline Release	4.2.0.0
Fix Description	Network Manager 4.2.0.0 Fix 42 Patchset. Modify the inv and gty end date logic to update shapes consistently with the member record being updated. Fix for ticket number 8001100659
Prerequisites	
Implementation Instructions	Unzip nm_4200_fix42.zip to a staging folder. Log onto SQL*PLUS as the Highways Owner with the staging folder as the working directory. At the prompt type "START nm_4200_fix42.sql" and press return. Exit SQL*PLUS.
Limitations	None known
Configuration Information	None
How To Test	Recommend full regression test
Rollback Strategy	Initially implement on a test environment

List of Amended Files

Filename	Version
log_nm_4200_fix42.sql	3.0
nm3sdm.pkw	2.34.1.3
nm_4200_fix42.sql	3.0

Log No. Summary

This chapter summarises all software changes that have been made in this release.

These changes are derived from the following sources,

- Issues raised by Customers via Bentley Support
- Issues raised internally by Bentley

Issues

Internal Task ID	Issue	Support Log(s)
0111158	The original code processed the updates of end-dates on shapes for all records on a specific datum. This resulted in an update to set the end-date which affected records that had been previously end-dated. The same process was responsible under some circumstances of re-setting the end-date to be null on more records that it should have done. The code now targets the specific member records, the update of which, the process is geared to respond.	8001100659
