After reading through this document, should you have any further training or consultancy requirements then please contact your **exor** account manager.

## Fix Details

Baseline Release	4.5.0.0
Fix Description	Nm0510 and Nm0590 now take asset permissions into account when allowing update.
Prerequisites	
Implementation Instructions	Follow the instructions in the readme file.
Limitations	None known
Configuration Information	None
How To Test	Recommend full regression test
Rollback Strategy	Initially implement on a test environment

## List of Amended Files

Filename	Version
nm0510.fmx	5.5
nm0590.fmx	5.7

## Log No. Summary

This chapter summarises all software changes that have been made in this release.

These changes are derived from the following sources,

- Issues raised by Customers via Exor Support
- Issues raised internally by Exor

### Issues

Internal Task ID	Issue	Support Log(s)
0112058	Asset attributes can no longer be updated without the appropriate privileges. The privileges are formed from a combination of role privileges assigned to the user and to the module and the specific asset type. Also, the security is affected by appropriate settings in the inv-category-modules relation. Both nm0510 and nm0590 modules are made to work consistently. Prior to the fix, nm0590 was unaffected by the inv-category-modules relation and modules did not always inform the user that they were prevented from updating a record.
