Network Manager
Release Notes v4.4.0.0 Fix 9

Introduction

This document defines the changes made to the Network Manager product for fix release v4.4.0.0 Fix 9 and is specifically targeted at end users.

After reading through this document, should you have any further training or consultancy requirements then please contact your **Bentley** account manager.

Fix Details

Baseline Release	4.4.0.0
Fix Description	Network Manager 4.4.0.0 Fix 9 Patchset. Minor changes affecting metadata in themes and SDO: 1 - drop layer now ensures all subordinate user SDO metadata to be removed 2 - Creation of a dyn-segged inventory layer creates the update-on-edit flag to Immediate.
Prerequisites	
Implementation Instructions	Unzip nm_4400_fix9.zip to a staging folder. Log onto SQL*PLUS as the Highways Owner with the staging folder as the working directory. At the prompt type "START nm_4400_fix9.sql" and press return. Exit SQL*PLUS.
Limitations	None known
Configuration Information	None
How To Test	Recommend full regression test
Rollback Strategy	Initially implement on a test environment

List of Amended Files

Filename	Version
log_nm_4400_fix9.sql	3.0
nm3sdm.pkw	2.39.1.3
nm3sdo.pkw	2.56.1.7
nm_4400_fix9.sql	3.0

Log No. Summary

This chapter summarises all software changes that have been made in this release.

These changes are derived from the following sources,

- Issues raised by Customers via Bentley Support
- Issues raised internally by Bentley

Issues

Internal Task ID	Issue	Support Log(s)
0111814	The generation of a spatial layer representing assets dynamically segmented from inventory location data now results in a theme which defaults the UPDATE_ON_EDIT flag to I for Immediate. Foreign table data will remain unaffected and will be generated with the flag set to N indicating asset spatial data will remain unchanged.	8001298116
0111815	Some subordinate user metadata in the mdsys.sdo_geom_metadata_table would be retained after a layer had been dropped. This is now corrected.
